Absolute target reduction in 2030	27,734	tCO2e

Summary:

SNNP has set a target to reduce GHG emissions by 20% by 2030, using 2022 as the base year. Currently, there are energy conservation projects and a solar Rooftop for 2024-2025, which are expected to reduce emissions by approximately 2,000 tCO2e. These projects will have a significant impact on SNNP's GHG emissions during this period. From 2026-2030, the energy conservation projects are under feasibility study.
